

Grayhawk

Scottsdale, Arizona

Grayhawk is a master planned residential community in north central Scottsdale. The project was carefully planned as a full, mixed use community in which residents could live, work, shop, and recreate. Unique to any other communities in the area, Grayhawk is composed of four distinct villages linked through an open environment that consists of a well orchestrated hierarchy of multi-modal circulation elements (vehicular, bikeways, trails, paths, and sidewalks).

LVA provided comprehensive master planning, rezoning services, site design, award winning landscape architecture, parks planning and design, and on-going support through architectural review committee, Development Review Board approvals and plat approvals
