

The Mayo Hospital, Phoenix, Arizona will be Mayo Clinic's first full-service medical center in the Southwest, and will be the centerpiece of a 250-acre medical campus. The site will have a hierarchy of landscape zones ranging from native desert to an 'oasis' environment. A nature trail adjacent to the outdoor cafeteria plaza offers visitors an opportunity to learn about native plants and animals.

LVA provided comprehensive master planning and zoning support services, landscape architecture, schematic design, design guidelines, construction documents and coordination of interior landscape. LVA also participated as a member of the Architectural Review Committee.

Project Information

- 250 Acres
- Mixed use hospital and medical campus
